EQUITY UPDATE

- The BSE SENSEX Index and Nifty 50 Index fell around 3% each amid escalating geopolitical tensions between Russia and Ukraine. There are concerns that rising tension could spark global supply chain disruption resulting in rising input costs.
- Mid-cap and small-cap indices fell by 5% and 9% respectively. All sectoral indices ended in red barring consumer durable and metals indices.
- Sector-wise, media (-10.1%) was hit hardest followed by the realty (-9.1%) and auto (-7.5%). However, financials and IT contributed the most to the Nifty 500 Index decline.
- Globally, Russia fell 35% in the month amid geopolitical tension, followed by Germany (-8%), France (-6%) and Hong Kong (-5%).

Global Macros

- The assault on Ukraine has alarmed global markets and stoked significant near-term uncertainty as the ongoing war pits Russia against virtually the entire developed world.
- Russia is an important supplier of energy and metals to the world in general and western countries in particular. Note that Russia's oil exports are higher than global spare capacity. Its gas supply to Europe is equivalent to ~30% of global LNG trade and is the only viable near-term alternative for the region.
- Additionally, soaring US inflation and hence sharper rate hike expectations from the US Fed have contributed to substantial selling by foreign investors.
- Crude was up by 11% and was quoting at USD101/bbl on Feb 28th.

Domestic Macros

- **Budget:** The government prioritized economic growth over fiscal consolidation in FY2023 union budget. It targeted central GFD/GDP at 6.4% in FY2023BE.
- **Growth:** Real GDP in 3QFY22 grew 5.4% led by private consumption growth of 7%.
- **Inflation/policy:** January CPI inflation increased sharply to 6.01% from 5.59% in December mainly due to adverse base effects. Currency: Rupee was stable during the month at Rs 74.5-75/USD despite headwinds which was supported by higher forex reserve (USD \$630bn).
- **Trade Deficit:** Trade deficit in January at US\$17.4 bn fell from US\$21.7 bn in December. Trade deficit was US\$155 bn in 10MFY22 (US\$74 bn in 10MFY21 and US\$141 bn in 10MFY20).

Regulatory, policy and market developments

- **Equity trading trends:** FPIs sold US\$.9 bn (till Feb 24) of Indian equities in the secondary market while DIIs bought US\$5 bn (till Feb 25).
- **MPC:** The RBI kept policy rate unchanged during its recent MPC meeting.
- **GST Collection:** The GST collection remained healthy at INR 1.3L Crore in Feb 2022.
- **Political:** Five Indian states have gone for assembly election; results will be announced on March 10.

3QFY21 results – In-line with expectations

- Corporate earnings for 3QFY22 came in line. The Nifty universe posted in-line sales/EBITDA/PBT/PAT growth at 30%/15%/25%/25% YoY, respectively. Ex-Metals and O&G, Nifty constituents clocked 12% YoY growth at the PAT level.
- However, sectors reported a wide divergence as Autos, Cement, Consumer Staples and Durables, Specialty Chemicals, Healthcare and Metals were impacted by sharp raw material (RM) inflation.

- BFSI was the standout sector in this quarter aided by improvements in loan growth and disbursements, while asset quality improved sequentially propelled by moderation in slippages as well as healthy recovery and upgrades. IT Services saw another quarter of robust USD revenue growth (+4.6% QoQ), while the deal pipeline remained healthy and hiring momentum offered further visibility on demand.
- Management commentaries indicated demand moderation in several rural oriented sectors even as rising RM inflation continued to impair margins.

Key sectoral highlights

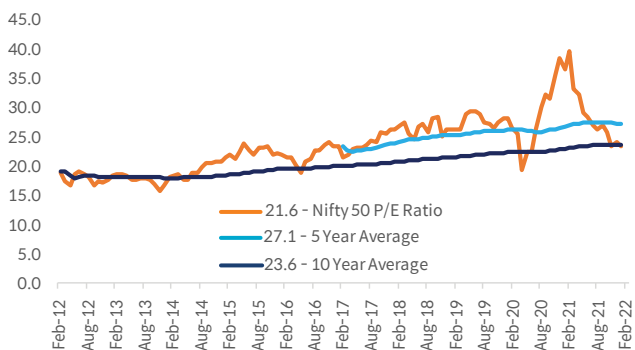

- Technology - 3QFY22 was a good quarter for Indian IT Services as companies under our coverage reported an overall QoQ top line growth of 4.6% (in USD), despite seasonality due to furloughs. The demand remains strong in the medium term.
- Private Banks and NBFCs - asset quality trends improved. Most of the banks posted a decline in their NPL ratios, led by controlled slippages as well as healthy recovery and upgrades. NBFCs saw sharp improvements in disbursements and collection efficiencies.
- Consumer - discretionary companies (Paints, QSR, Liquor etc.) delivered strong double-digit top line growth while staples' performance was muted as rural showed visible slowdown and margins were hurt by RM prices.
- Cement - the sector was adversely impacted by weak volumes owing to unseasonal rains while high energy costs took a severe toll on margins and profitability.
- Healthcare - after 12 quarters of growth, 3QFY22 marked the first decline in profits as rise in raw material costs due to supply disruption in China and continued price erosion in US depressed profitability.

Outlook

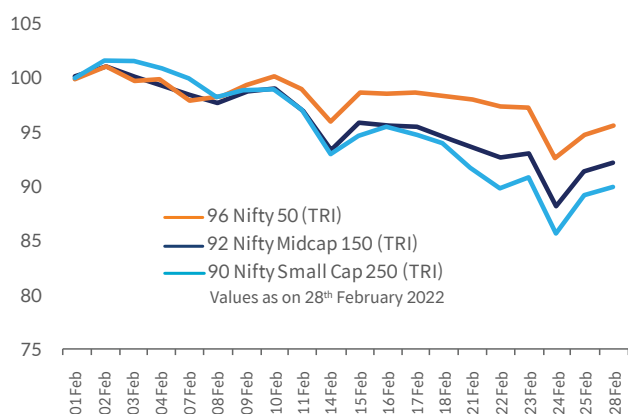

- **Global macros take centre stage:** The decision of Western countries to impose large-scale restrictions and sanctions on Russian banks including the Russian central bank can have widespread short-term repercussions on global inflation, investment and trade and medium-term implications for globalization and geopolitics. Likely disruption of commodity supplies will increase the prices in the near term.
- **Underlying Economic recovery:** is underway with broad-based recovery across sectors. High-touch based service economy which was impacted in the last 2 years is expected to see broad-based recovery as omicron wave recedes owing to herd immunity. This should support employment generation given that they are labour intensive industries.
- **Key things to watch out are:** (a) sustained high oil prices, (b) any sharper than expected rate hikes by global central banks and (c) pace of economic recovery as pandemic subsides.
- **Over the medium term:** we continue to remain constructive on equities and believe India is on the cusp of achieving robust growth over the next few years. Higher capex provisioning and benefits from PLI (potentially can add 1.5% to GDP over the next 5 years) should potentially revive overall capital expenditure across the sectors, boost employment as well as credit growth.
- **Valuation:** The Nifty index is currently trading at about 16.5x FY24E earnings and we believe valuations are reasonable given the expectation of 22% earnings growth over FY20-24 period.
- **Recommendation:** We would advise investors not to time the market and may invest in equities for the long term within their earmarked asset allocation in a disciplined way (based on one's risk profile). The staggered investments through Systematic Investment Plan (SIP) or Systematic Transfer Plan (STP) may be considered one of the good ways to invest in equities.

We would suggest you may invest in a disciplined way in equities for long term, within the earmarked asset allocation (based on individual risk profile). In the current market scenario, staggered investments through SIP (Systematic Investment Plan) & STP (Systematic Transfer Plan), may be one of the best ways to invest in equities.

DEBT UPDATE

Market Movement

Month started with growing expectations for the number of interest rate hikes that would be delivered by the Federal Reserve (Fed), Bank of England (BoE) and the European Central Bank (ECB) that ramped up quickly. There were concerns that the central banks may dampen growth in their efforts to get inflation under control.

But closer to month end things turned around with increasing oil prices, current geopolitics scenario and rising rates (Fed tightening) leading to a double squeeze on the global economy amid concerns on growth, an all-time high global debt and dull US consumer sentiments. At home, not only are the risks of recovery rising, but a USD10/bbl rise in oil widens the CAD by 0.4-0.5% of GDP and lifts CPI by 60-70bp, if fully passed through. Else, duty cuts could impound fiscal space by 40-50bp.

Market expectations are that FED may increase rates more aggressively than anticipated to counter rising inflation. This has pushed up yields while flattening the Treasury yield curve. US 10 years yields touched high of 2.04% during the month but ended at 1.82%, as investors rushed to safe haven post oil rose to \$100/bbl. The two-year US Treasury yield, which typically moves in step with interest rate expectations, reached high of 1.60% during the month.

In India, yield curve has turned steep again during the month with 1 years G-sec moving up by 7 bps and 10 years G-sec rose by 23 bps. Overnight rates (3.17%) have reached a level lower than reverse repo rate.

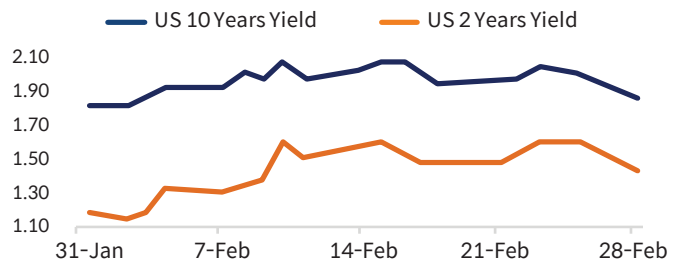

Global Macros

- **Central Banks:** Major central banks have turned hawkish, with few already moved towards the rate hike. With high inflation and strong job gains in mind, the market now expects the Fed to deliver nearly six rate hikes by the end of the year. The first hike is expected to be by end of the month.
- **Growth:** Data is showing mixed signal for growth
- **Geo-Political scenario:** The evolution of the Russia – Ukraine conflict remains uncertain. At this stage the immediate economic impact on developed markets is increasing food and energy prices.

Domestic Macros

- **GDP:** Q3FY22 real GDP slowed sharply to 5.4% (vs. 8.5% in Q2FY22), missing estimates by ~100bps. However, with a rapid coverage in vaccination and subsequent normalization of economic activity, it is expected that private consumption will recover strongly and lead to an increase in investment.
- **Fiscal:** The trade deficit widened again to USD21.2bn, after briefly touching sub-USD18bn levels in Jan'22 – mainly due to the surge in oil and gold imports, even as non-oil non-gold imports and exports slowed down sequentially. Mar'22 will likely see the deficit widen further, led by higher crude and other (agri) commodity prices
- **Crude-oil:** Oil prices that were rising amid concerns that OPEC+ can't keep up with rising global demand, crossed \$100 bbl due to supply concerns arising from Russia – Ukraine war.

Source: Kotak Research, Bloomberg and Investing.com as of March 02, 2022 for all above data

Note: Feb-22 (Jan-22)

- **Inflation:** Headline CPI inched up to 7-month high of 6.01% on an adverse base, although declined MoM led by food prices. However, core inflation remains sticky above 6% levels. Upside risks remain on account of supply side disruptions/pending price hikes as & when demand firms up.
- **Liquidity:** Banking system liquidity well in surplus mode, even though RBI continues to deploy liquidity management tools.
- **Credit Growth:** Credit growth above 8% for the 2nd consecutive fortnight. It is expected to pick up with growth. RBI might wait for credit growth to improve hence it is maintaining interest rate.

Key Events

Attention last month shifted from Covid-19 to escalated geopolitical tensions between Russia and Ukraine. Apart from the human life damage, there are concerns that rising tension could spark global supply chain disruption resulting in rising input costs.

At home, the government prioritized economic growth over fiscal consolidation in FY2023 Union Budget and RBI maintained accommodative stance, reason being uneven domestic economic recovery and the need to complement fiscal policy.

Money market saw gradual uptick in yields, due to constant fear of inflation and higher borrowing program in budget.

In mid to long term G-sec yield curve, yields have gone up more than shorter end. 10 years were highest since COVID-19.

As for Inflation, upside risks remains due to ongoing energy crisis and supply side disruptions but underlying trend might remain within the RBI's comfort zone.

6 Month T-Bills	4.23%	4.21%	↑

Market Outlook

The market has turned uncertain again but this time due to escalated geo-political scenario. Amid the concern of high inflation globally, energy prices have shoot up and supply chains have been disrupted due to Russia-Ukraine war. This will pose high risk on already high inflation. At home, where CAD is already ballooned, government meeting fiscal deficit target looks difficult and FPI outflow may create further pressure on currency – all these along with pressure on energy prices will impact economy growth. RBI may take some contingent measure to keep the numbers in check while managing growth on its recovery path.

It is advisable to stay invested at the shorter end of the yield curve. Investor may look at Liquid Fund (very short investment tenure) and Low duration Fund (short investment tenure) and for anything above that, investors may look at Short Term Fund.

How to read a Mutual Fund Factsheet?

Know how your money is managed

The benefits of investing in mutual funds are well known. However, buying them on face value is not enough. Investors should know how their money is managed. They should research as much as possible on a scheme's strategy, performance, risks involved and how the money is invested. Many investors shy away from this exercise as they consider it cumbersome. To make life easy for investors, mutual funds disclose a fund factsheet which details the quintessential information required before investing.

The factsheet is a concise document with a plethora of information about how the fund is managed; it is disclosed on a monthly basis. This article tries to decode the factsheet and explains how investors should use it for making investment decisions.

Five things to look out for in mutual fund factsheets

Basic information

The factsheet provides all the general information on the fund – its objective or philosophy, options (growth or dividend), plans (direct and regular), net asset value (NAV) of each plan, minimum investment amount, systematic features (SIP, SWP, STP) and assets under management (AUM) data.

It is important to know about the fund's exit load, as it gets deducted from total gains if the investor exits during a specific period after investment. It is a small penalty charged on prevailing NAV to discourage premature redemption. Different schemes have different exit loads, while few such as Overnight funds generally do not have exit load. Some funds have a fixed exit load and some have a tiered structure. For instance, a fund may have nil exit load if the investor withdraws up to 10% of units per year. For units more than 10%, it charges 3% for exit before 12 months, 2% for exit before 24 months, 1% for exit before 36 months and nil after that.

Investors should look out for the fund's product labeling and riskometer. Product labeling underlines product suitability for investors. It tells about ideal investment time frame required to benefit from the fund and where it invests. Riskometer is a presentation that helps investors measure the risk associated with the fund. It presents six levels of risks - low, Low to Moderate, moderate, moderately High, High and Very High. Since an equity fund typically has high risk involved, needle of the scale points towards moderately high /high, suggesting the fund is meant for investors with a high risk-taking appetite. Examples of equity and liquid funds are listed below:

Equity Fund

Product Labeling

This product is suitable for investors who are seeking:

- Growth of capital in the long term
- Investment predominantly in equity and equity-related instruments

Debt Fund

Product Labeling

This product is suitable for investors who are seeking:

- Optimal returns in the short term
- Investment in portfolio of short duration money market and debt instruments

Performance aspects

Although the past performance does not guarantee future trend, investors can get a broad idea on how a fund may perform in future. This section looks at the fund's performance (lump sum as well as SIP) across time frames and compares it with the fund's benchmark and a

market benchmark. Many fund houses provide graphical representation of calendar year performance of funds along with standard SEBI prescribed performance tables.

Fund manager details

In an investment voyage, mutual fund is the ship and fund manager is the sailor. Success of the voyage depends on the manager's expertise. Hence, it is imperative to know the fund manager well.

The factsheet provides information on the manager's experience and qualification. You can find out their track record by reviewing the performance of all schemes managed by them.

Portfolio aspects

Key portfolio attributes to look for in equity/ hybrid funds

Asset allocation

It highlights the exposure to different asset classes - equity, debt and cash - in a portfolio.

Company and sector allocation

It informs investors about a fund's concentration level in sectors and stocks. An aggressive fund manager may have high concentration among fewer companies and sectors, which may not be appropriate for investors seeking diversification. Investors should check whether the fund has taken higher-than-prudent exposure to riskier sectors or low quality stocks.

Key portfolio attributes to look for in debt funds

Credit quality profile

A debt fund's holdings are classified according to its credit ratings such as AAA, AA+, A1+ (given by credit rating agencies), etc.

Funds with higher exposure to AAA (top rated long-term debt) and A1+ (top rated short-term debt) have lower credit risk and higher credit quality.

Conservative investors should check whether the fund manager in order to boost performance is taking undue exposure to lower rated debt papers as they typically trade at higher yields but are exposed to high credit and liquidity risk vis-à-vis top rated papers.

The data used is for illustration purpose only.

Instrument break-up

It highlights allocation to various debt instruments such as commercial papers (CPs), certificate of deposits (CDs), NCDs and bonds, gilts and cash equivalents.

Investors in shorter maturity debt funds such as liquid, ultra short term, short-term debt funds should check whether higher proportion has been allocated to shorter maturity instruments such as CPs and CDs. As long-term debt instruments such as gilts and bonds are typically more sensitive to interest rate changes compared with CPs and CDs, higher exposure to former instruments by liquid or ultra-short term may result in high risk.

The data used is for illustration purpose only.

■ Sharpe Ratio:

Sharpe Ratio is a risk to reward ratio, it measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

■ Beta:

Beta of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measure the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

■ Standard Deviation:

A statistical measure that defines expected volatility/risk associated with a portfolio. This explains the variation/deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

■ Risk Free Return:

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

■ Indexation Benefit:

- | Long Term Capital Gains (holding period of over 3 years) from Debt Mutual Funds are taxed at 20% plus applicable surcharge and cess with the benefit of indexation.
- | Government notifies Cost Inflation Index (CII) for each financial year taking into consideration the prevailing inflation levels.
- | The cost of acquisition for computation of tax is adjusted for inflation using CII, there by reducing the capital gains from tax perspective.
- | An investment made into a debt fund towards the end of a financial year (say, in March 2020) and held for a little over 3 years (say, in April 2023) would be eligible for application of CII over 5 financial years, resulting in 4 indexation benefit.

■ Total Expense Ratio:

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

■ Tracking Error:

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

■ Average Maturity:

Weighted average maturity of the securities in scheme.

■ Portfolio Yield (Yield To Maturity):

Weighted average yield of the securities in scheme portfolio.

■ Portfolio Turnover Ratio:

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

■ Modified Duration:

A formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration of portfolio can be used to anticipate the change in market value of portfolio for every change in portfolio yield.

■ Macaulay Duration (Duration):

Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

\$ For computation of since inception returns (%) the allotment NAV has been taken as ₹1000.00 for MACMF, MASF MAOF, & MAMMF and ₹10.00 for all other Schemes. In case, the start / end date of the concerned period is a non-business date (NBD), the NAV of the previous date is considered for computation of returns.

Returns (%) for less than 1 year calculated on simple annualized basis.

The calculations of returns shall assume reinvestment of all payouts at the then prevailing NAV. CAGR - Compounded Annualised Growth returns. NAV (per unit) is at the end of the period.

**Standard benchmark prescribed as per the applicable SEBI circular. For MASF the returns are for Regular Savings Plan - Growth Option. Returns for others scheme are provided for Regular Plan Growth Option. Load is not considered for computation of return.
