**C. WHAT ARE THE INVESTMENT STRATEGIES?**

The fund will predominantly invest in large cap companies, yet it has the flexibility to invest upto 20% in non-large cap companies. The fund manager may not have any bias towards particular theme, sector, or style in picking investment opportunities.

The Scheme aims to maximize the long term capital appreciation by finding investment opportunities resulting from Indian economic growth and its structural shifts through investing in equities, equities related securities with risk mitigating and controlling measures.

### **Investment in Derivatives:**

The Scheme may take derivatives position based on the opportunities available subject to the guidelines issued by SEBI from time to time and in line with the overall investment objective of the Scheme. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under the SEBI Regulations

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

For detailed derivative strategies, please refer to SAI.

### **Policy for Investment decisions**

The investment policy of the AMC has been determined by the Investment Committee (“IC”) which has been ratified by the Boards of the AMC and Trustee. At the strategic level, the broad investment philosophy of the AMC and the authorized exposure limits are spelt out in the Investment Policy of the AMC. During trading hours, the Fund Managers have the discretion to take investment decisions for the Scheme within the limits defined in the Investment Policy, these decisions and the reasons thereof are communicated to the CEO for post facto approval.

The designated Fund Manager(s) of the Scheme will be responsible for taking day-to-day investment decisions and will inter-alia be responsible for asset allocation, security selection and timing of investment decisions.

### **Portfolio Turnover Policy**

Portfolio turnover is defined as the aggregate value of investment and disinvestment in equity/equity related securities (other than those caused by the Purchases and Redemptions by Unit Holders) as a percentage of the average corpus of the Scheme during a specified period of time. This would also exclude investments /disinvestments in money market instruments.

The fund managers normally will buy stocks which they believe will deliver superior earnings growth over a one-to-two year period and hence the portfolio turnover is not expected to be very high. However, during volatile market conditions, the fund manager has the flexibility to churn the portfolio actively to optimize returns keeping in mind the cost associated with it.

#### **D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?**

**Benchmark (Total Returns Index):** The performance of the scheme will be benchmarked to the performance of the Nifty 100 Index (TRI).

##### **Rationale for adoption of benchmark:**

The fund is classified as a large cap fund. As per clause 2.7.1 of SEBI Master Circular dated May 19, 2023, large caps includes the Top 100 companies by market capitalization. Hence, the performance of the scheme will be benchmarked to the performance of the **Nifty 100 TRI**. The same has been chosen as the benchmark as the asset allocation pattern of the benchmark is in conformity with the declared asset allocation pattern of the scheme in the Scheme Information Document.

The Trustees reserve the right to change the benchmark of the Scheme by suitable notification to the investors to this effect.

The performances of the schemes of the Mutual Fund are reviewed by the Investment Committee (“IC”) as well as the Board of Directors of the AMC and Trustee periodically. The IC is operational at the AMC level and has majority representation from the senior management of the company. Monthly reports on the performance of the schemes with appropriate benchmark indices are also sent to the Directors of the AMC and Trustee and also with the relative performance of the schemes of other mutual funds schemes in the same category which is placed with the Board of Directors of the AMC and Trustee. Further, in terms of clause 6.14 of SEBI Master Circular dated May 19, 2023 the performance of the schemes will be benchmarked against the performance of respective benchmarks. Since the scheme is managed with no bias towards any theme, sector, market cap or style, a suitable benchmark indexes have been chosen as the benchmark.

The performance of the Scheme compared to its benchmark index will be reviewed at every meeting of the Board of Directors of the AMC and Trustee and corrective action as proposed will be taken in case of unsatisfactory performance.

In terms of clause 1.8 of SEBI Master Circular dated May 19, 2023, the AMC and Trustee may change the benchmark index or select an additional benchmark index after recording adequate justification for carrying out such change. ### **Part III- OTHER DETAILS**

#### **A. COMPUTATION OF NAV**

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

NAV of Units under the Options there under can be calculated as shown below:

(Market or Fair Value of Scheme's investments + Current assets including Accrued Income -  
Current Liabilities and provisions including accrued expenses)

NAV =

---

No. of Units outstanding under the Scheme/Option.

The NAV, the sale and repurchase prices of the Units will be calculated and announced at the close of each working day. The NAVs of the Scheme will be computed and units will be allotted upto 3 decimals.

Computation of NAV will be done after taking into account IDCW paid, if any, and the distribution tax thereon, if applicable. Therefore, once IDCW are distributed under the IDCW Option, the NAV of the Units under the IDCW Option would always remain lower than the NAV of the Units issued under the Growth Option. The income earned and the profits realized in respect of the Units issued under the Growth Option remain invested and are reflected in the NAV of the Units.

The valuation of the Schemes' assets and calculation of the Schemes' NAVs shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

Illustration on Computation of NAV:

If the net assets of the Scheme are Rs.10,65,44,345.34 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows:

$10,65,44,345.34 / 1,00,00,000 = \text{Rs. } 10.6544 \text{ p.u. (rounded off to four decimals)}$

The Mutual Fund may charge the load within the stipulated limit of 5% and without any discrimination to any specific group. The Repurchase Price however, will not be lower than 95% of the NAV.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

## **B. NEW FUND OFFER (NFO) EXPENSES**

These expenses are incurred for the purpose of various activities related to the NFO like sales and distribution fees paid marketing and advertising, registrar expenses, printing and stationary, bank charges etc. NFO expenses were borne by the AMC. No NFO expenses were charged to the Scheme.

## **C. ANNUAL SCHEME RECURRING EXPENSES**

These are the fees and expenses for operating the scheme. These expenses include Investment Management and Advisory Fee charged by the AMC, Registrar and Transfer Agents' fee, marketing and selling costs etc. as given in the table below:

The AMC has estimated that upto 2.25% of the daily net assets of the Scheme will be charged to the scheme as expenses. As per the Regulations, the maximum recurring expenses including investment management and advisory fee that can be charged to the Scheme shall be subject to a percentage limit of daily net assets as in the table below:

<b>First Rs. 500 crores</b>	2.25%
<b>Next Rs. 250 crores</b>	2.00%
<b>Next Rs. 1250crores</b>	1.75%

## D. LOAD STRUCTURE

Exit Load is an amount which is paid by the investor to redeem the units from the scheme. Load amounts are variable and are subject to change from time to time. For the current applicable structure, please refer to the website of the AMC (<https://www.miraecassetmf.co.in/>) or may call at '1800 2090 777' or your distributor.

The Trustee reserves the right to modify/alter the load structure and may decide to charge an exit load on the Units with prospective effect, subject to the maximum limits as prescribed under the SEBI Regulations. At the time of changing the load structure, the AMC shall take the following steps:

- Arrangements shall be made to display the changes/modifications in the SID in the form of a notice in all the Mirae Asset ISCs' and distributors' offices.

## **Section II**

### **I. Introduction**

#### **A. Definitions/interpretation**

Please refer the definitions/interpretation as disclosed under:  
<https://www.miraeassetmf.co.in/docs/default-source/offer-documents-data/definitions-interpretation.pdf>

#### **B. Risk factors**

##### **Standard Risk Factors:**

- Investment in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal
- As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the scheme can go up or down depending on various factors and forces affecting capital markets and money markets.
- Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee the future performance of the Scheme.
- The Scheme does not in any manner indicate its quality or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1.00 lakh made by it towards setting up the Mirae Asset Mutual Fund.
- The present scheme is not a guaranteed or assured return scheme. In addition, the scheme does not guarantee or assure any Income distribution cum Capital Withdrawal (IDCW) and also does not guarantee or assure that it will make any IDCW distribution, though it has every intention to make the same in the distributions of Income Distribution cum Capital Withdrawal option. All IDCW distributions of Income Distribution cum Capital Withdrawal will be subjected to the investment performance of the Scheme.

##### **Scheme Specific Risk Factors**

##### **Risks Associated with Equity Investments:**

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments in equity and equity related securities. The NAVs of the units of the Scheme can go up or down because of various factors that affect the capital markets in general. Macroeconomic factors like changes in tax rates, political uncertainties, changes in government regulations etc. and industry specific factors like competition, demand supply, etc. could impact the performance of the companies in which the Scheme invests.

##### **Settlement Risk**

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of sale proceeds. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

### **Regulatory Risk**

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

### **Risks associated with Debt and Money Market Instruments**

#### **Interest Rate Risk/Price Risk**

From the perspective of coupon rates, debt securities can be classified in two categories, i.e., Fixed coupon bearing securities and Floating coupon bearing securities. In Fixed coupon bearing securities, the coupon rate is determined at the time of investment and paid/received at the predetermined frequency. In the floating coupon bearing securities, on the other hand, the coupon rate changes - 'floats' - with the underlying benchmark rate, e.g., MIBOR, 1 yr. Treasury bill. Fixed income securities (such as Government Securities, bonds, debentures and money market instruments) where a fixed return is offered, run price risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, the payment-frequency of such coupon, days to maturity and the increase or decrease in the level of interest rates. The prices of Government Securities (existing and new) will be influenced only by movement in interest rates in the financial system and liquidity. Whereas, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced not only by the change in interest rates but also by credit rating of the security and liquidity thereof.

#### **Reinvestment Risk**

Investments in fixed income securities may carry reinvestment risk as interest rates prevailing in the market may differ from the original coupon of the bond. Consequently the proceeds from regular coupon and principal payments on due date may get invested at a lower rate.

#### **Credit Risk**

**Credit Risk comprises three components.**

##### **- Default Risk**

Securities carry a risk of repayment of principal or interest by the borrower. This is called as default risk. The default risk depends on micro economic factors such as financial soundness and ability of the borrower and macro-economic factors such as industry performance, competition, trade barriers etc.

##### **- Downgrade Risk**

It is the risk that credit rating agency downgrades the rating of an issuer based on earnings and cash flows generating capacity. The credit rating migration of issuance leads to increase in the credit spread and thus reduces the price of corporate bond.

#### **- Spread Risk**

Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV of the Debt Schemes. Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV could fall.

#### **Prepayment Risk**

The Borrower may prepay the receivables prior to their respective due dates. This may result in a change in the yield and tenor for the scheme.

#### **Liquidity Risk**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The length of time for settlement may affect the Scheme in the event it has to meet an inordinately large number of redemption or of restructuring of the Scheme's investment portfolio.

### **Risks Associated with Derivatives**

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional instruments. Such risks include mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount.

The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However the gains of an options writer are limited to the premiums earned. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. The loss can be unlimited as underlying asset can increase to any levels.

The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price and the loss is limited to strike price.

Investments in futures face the same risk as the investments in the underlying securities. The extent of loss is the same as in the underlying securities. However, the risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets. The derivatives are also subject to liquidity risk as the securities in the cash markets. The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values. For further details please refer to section "Investments Limitations and Restrictions in Derivatives" in this SID.

### **Risk associated with Securitized Debt**

Securitized debt papers carry credit risk of the Obligor and are dependent on the servicing of the PTC/Contributions etc. However these are offset suitably by appropriate pool selection as well as credit enhancements specified by Rating Agencies. In cases where the underlying facilities are linked to benchmark rates, the securitized debt papers may be adversely impacted by adverse movements in benchmark rates. However this risk is mitigated to an extent by appropriate credit enhancement specified by rating agencies. Securitized debt papers also carry the risks of prepayment by the obligors. In case of prepayments of securities debt papers, it may result in reduced actual duration as compared to the expected duration of the paper at the time of purchase, which may adversely impact the portfolio yield. These papers also carry risk associated with the collection agent who is responsible for collection of receivables and depositing them. The Investment team evaluates the risks associated with such investments before making an investment decision. The underlying assets in the case of investment in securitized debt could be mortgages or other assets like credit card receivables, automobile/vehicle/personal/commercial/corporate loans and any other receivables/ loans/debt. The risks associated with the underlying assets can be described as under:

Credit card receivables are unsecured. Automobile/vehicle loan receivables are usually secured by the underlying automobile/vehicle and sometimes by a guarantor. Mortgages are secured by the underlying property. Personal loans are usually unsecured.

Corporate loans could be unsecured or secured by a charge on fixed assets/receivables of the company or a letter of comfort from the parent company or a guarantee from a bank/financial institution. As a rule of thumb, underlying assets which are secured by a physical asset/guarantor are perceived to be less risky than those which are unsecured. By virtue of this, the risk and therefore the yield in descending order of magnitude would be credit card receivables, personal loans, vehicle/automobile loans, mortgages and corporate loans assuming the same rating.

Liquidity in Securitized Debt may be affected by trading volumes, settlement periods and transfer procedures. These factors may cause potential losses from being not able to sell the securitized debt instruments at its fair value.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risks. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than government securities. Further, even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

### **Risks associated with investing in Tri-Party Repo through CCIL (TREPS)**

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Triparty Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss,

it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower. Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.”

### **C. Risk mitigation strategies**

Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.

- b) Monitoring the sectoral diversification of the fund to ensure that the fund is well diversified across various sectors to avoid any sectoral risk.
- c) Ensure that the fund is diversified across various stocks to avoid any stock specific risk.
- d) Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.

### **Overview of Debt Markets in India**

Indian fixed income market, one of the largest and most developed in South Asia, is well integrated with the global financial markets. Screen based order matching system developed by the Reserve Bank of India (RBI) for trading in government securities, straight through settlement system for the same, settlements guaranteed by the Clearing Corporation of India and innovative instruments like TREPS have contributed in reducing the settlement risk and increasing the confidence level of the market participants.

The RBI reviews the monetary policy six times a year giving the guidance to the market on direction of interest rate movement, liquidity and credit expansion. The central bank has been operating as an independent authority, formulating the policies to maintain price stability and adequate liquidity. Bonds are traded in dematerialized form. Credit rating agencies have been playing an important role in the market and are an important source of information to manage the credit risk.

Government (Central and State) is the largest issuer of debt in the market. Public sector enterprises, quasi government bodies and private sector companies are other issuers. Insurance companies, provident funds, banks, mutual funds, financial institutions, corporates and FPIs are major investors in the market. Government loans are available up to 40 years maturity. Variety of instruments available for investments including plain vanilla bonds, floating rate bonds, money market instruments, structured obligations and interest rate derivatives make it possible to manage the interest rate risk effectively.

Indicative levels of the instruments as on May 31, 2024 are as follows:

<b>Instrument</b>	<b>Maturity</b>	<b>Tenure</b>	<b>Yield</b>	<b>Liquidity</b>
TREPS / Repo	Short	Overnight	6.76	Very High
CP / CD / T Bills	Short	3 months CP*	7.65	High
		3 months CD	7.15	
		1 Year CP*	8.12	
		1 Year CD	7.71	
Central Government securities	Low to High	10 years	6.98	Medium

(iii) **Terms of Issue**

- **Listing:**

The Scheme being open ended, the Units are not proposed to be listed on any stock exchange and no transfer facility on the exchange is provided. However, the Trustee reserves the right to list the units as and when open-end Schemes are permitted to be listed under the Regulations, and if the Trustee considers it necessary in the interest of unit holders of the Scheme.

- **Redemption:**

The Unit Holder has the option to request for Redemption either in amount in rupees or in number of Units. The minimum redemption amount shall be 'any amount' or 'any number of units' as requested by the investor at the time of redemption request.

**Redemption Price:**

The Redemption Price of the Units is the price at which a Unit Holder can redeem Units of a scheme. It will be calculated as described below:

Redemption Price = Applicable NAV - (Applicable NAV x Exit Load\*)

\* Exit Load, whatever is applicable, will be charged.

Redemption Price will be calculated for up to three decimal places for the Scheme.

For example, if the Applicable NAV of a Scheme is Rs.10.5550, and it has a 2% Exit Load, the Redemption Price will be calculated as follows:

Redemption Price = 10.5550 - (10.5550 X 2.00%) i.e. 10.4550 - 0.2110 = 10.3440

If the Scheme has no Exit Load, the Redemption Price will be equal to the Applicable NAV.

The Securities Transaction Tax levied under the Income Tax Act, 1961, at the applicable rate on the amount of redemption will be reduced from the amount of redemption.

**To illustrate:**

If a Redemption of 4,900 units is sought by the Unit Holder at a Redemption Price of Rs. 10.3440 (as calculated above), the redemption amount is Rs. 50,685.60. Securities Transaction Tax (STT) for instance is 0.001%. This will be further reduced by the STT of Re. 0.50 (i.e. Rs. 50,685.60 x 0.001%), making the net redemption amount Rs. 50,685.10.

If a Redemption of Rs. 10,000 is sought by the Unit Holder at a Net Redemption Price of Rs. 10.3440 (as calculated above), which will give 966.744 Units; the effective redemption amount will be grossed up to Rs. 10,204.08 (i.e.  $10,000 \div (1-2\%)$ ) and 966.744 units ( $10,204.08 \div 10.555$ ) will be redeemed. This is to ensure that the Unit Holder receives the net amount of Rs. 10,000 as desired.

Investors may note that the Trustee has a right to modify the existing Load structure in any manner subject to a maximum as prescribed under the Regulations and with prospective effect only.

Please refer section – LOAD STRUCTURE.
